# Research Question

**Can cultural values be effectively incorporated into a decision-tree analysis for natural resource managers?**

- We aim to characterize cultural values held by community members by holding one focus group interview within each Tribal nation.

The remaining slides have been omitted so as to respect confidentially agreements between researcher and Tribal Nations and communities. I hope to make available more slides once I get permission to distribute them publicly.

In the meantime, if you have any questions,  
please contact me at
